

AC-3105

NIGHT VISION GOGGLE

- ❖ Increased depth perception
- ❖ Hand-held or head-mounted configuration
- ❖ Can be converted to a long-range binocular
- ❖ IR illuminator
- ❖ Rugged

The **AC-3105** is a dual (2) tube night vision binocular / goggle built around high performance Gen 1 night vision image intensifiers. Developed as an economical alternative to more expensive Gen 2+ & 3 devices, it is designed to perform the same tasks. In binocular configuration each eye is looking through an independent image tube and objective lens, just like in a regular binocular. This gives the user better depth perception and allows the user to better judge distances and relative motion. The user's ability to operate a vehicle or to maneuver in the dark with a binocular night vision goggle improves dramatically. The goggle also features a powerful IR illuminator that enhances close-hand task performance. With the help of a pair of 4x lenses, the goggle can be converted to a hand-held long-range binocular. Covered by one-year manufacturer warranty.

AC-3105 GOGGLE KIT INCLUDES:

Carrying Case, Lens Caps, Flip-Up Headgear, Operator's manual, Batteries

OPTIONAL ACCESSORIES FOR AC-3105 GOGGLE:

4x Objective Lens
Flip-Up Helmet Mount

SPECIFICATIONS
